Intro to Software Systems
Lab activity April 8

Question 1

Display the result after multiplying two numbers passed as arguments. If number of arguments are not proper, print error message. Eg. `./run.sh 3 4` gives output 12.

Question 2

Write a shell script to get the total count of the word "Linux" in all the ".txt" files present in the current directory as well as across files present in all the subdirectories. Script should just output a single integer.
